## **DETAILED ACTION**

### ***Claim Objections***

Claims 1 and 2 are objected to because of the following informalities:

It is suggested that in:

Claim 1, lines 6, 11, and 12, delete "said".

Claim 2, lines 2 and 4, delete "said".

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the insertional coupling" in lines 5 and 6. There is insufficient antecedent basis for this limitation in the claim.

Claim 2 recites the limitation "the interconnective means" in line 3. There is insufficient antecedent basis for this limitation in the claim.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,234,858 B1 to Nix.

Nix discloses the claimed invention except for the through-holes having an octagonal shape and the tenons having an umbrella shape. However, it would have been an obvious matter of design choice to make the different portions of the foam modular toy of Nix of whatever form or shape was desired or expedient. A change in form or shape is generally recognized as being within the level of ordinary skill in the art, absent any showing of unexpected results. *In re Dailey et al.*, 149 USPQ 47.

Furthermore, the specification of the present invention does not provide any criticality (i.e., provides an advantage, is used for a particular purpose, or solves a stated problem) for the use of the specific shapes of the through-holes and tenons (see page 3, lines 12-21 of the present invention). In addition, Nix teaches the through-holes having a hexagonal shape (see figs. 11-14, 16, 17), therefore the modification of at least the through-holes to have an octagonal shape would not have been an unreasonable or incomprehensible modification for one of ordinary skill in the art to make.
